

Blackboard Learn™ 9.1 - Supersite 3.0 Course Management Integration

Overview for Blackboard Administrators

The Language department is currently using textbooks published by [Vista Higher Learning](#) (VHL). These textbooks include access to online learning materials via a course management platform called Supersite 3.0. The Supersite 3.0 materials are hosted on VHL's servers, and include activities instructors can assign to students. These materials rely on a backend-system built specifically for languages, and therefore cannot be hosted directly from an institution's Blackboard™ servers.

Instructors have asked for increased compatibility between Blackboard™ courses and the Supersite 3.0 platform. To meet this request, VHL has created a feature which allows some degree of integration between the two systems. The integration feature allows instructors to:

- Create a one-to-one relationship between their Supersite 3.0 and their Blackboard Learn™ 9.1 course rosters.
- Allow students to access their Supersite 3.0 course from Blackboard™ without going through a separate login process.

This integration requires:

- An installation of Blackboard Learn™ 9.1 SP10 or higher.
- Blackboard Learn's™ Cloud Connection¹ to be enabled.
- Vista Higher Learning to be configured and activated as a partner.

With the Blackboard™ Partner Cloud set-up complete, instructors can set up the integration between their Blackboard™ and Supersite 3.0 courses.
